COMPARISON GUIDE

Static vs Dynamic Website

Choosing the right website architecture is crucial for your business operations. Review our comparison matrix below to determine which solution fits your business needs.

Feature	Static Website	Dynamic Website (Recommended)
Content Updates	Developer required	Admin can update content easily
Admin Panel	Not included	Included / Available
Database Integration	Usually not required	Can be fully integrated
Content Management	Limited to hardcoded files	Highly flexible & automated
Product Management	Limited / Manual updates	Managed easily through dashboard
Image & Media Management	Developer required	Admin can upload/update anytime
Scalability & Growth	Basic informational site	High scalability for expansion
Best Suited For	Small informational & portfolio sites	Businesses requiring regular updates & growth

Need complete control over your website?

Choose a Dynamic Website with an Admin Panel to update text, photos, products, and news without paying developer fees every time!

ENGINEERING

Built With Modern Technology

✓ Role-Based Access

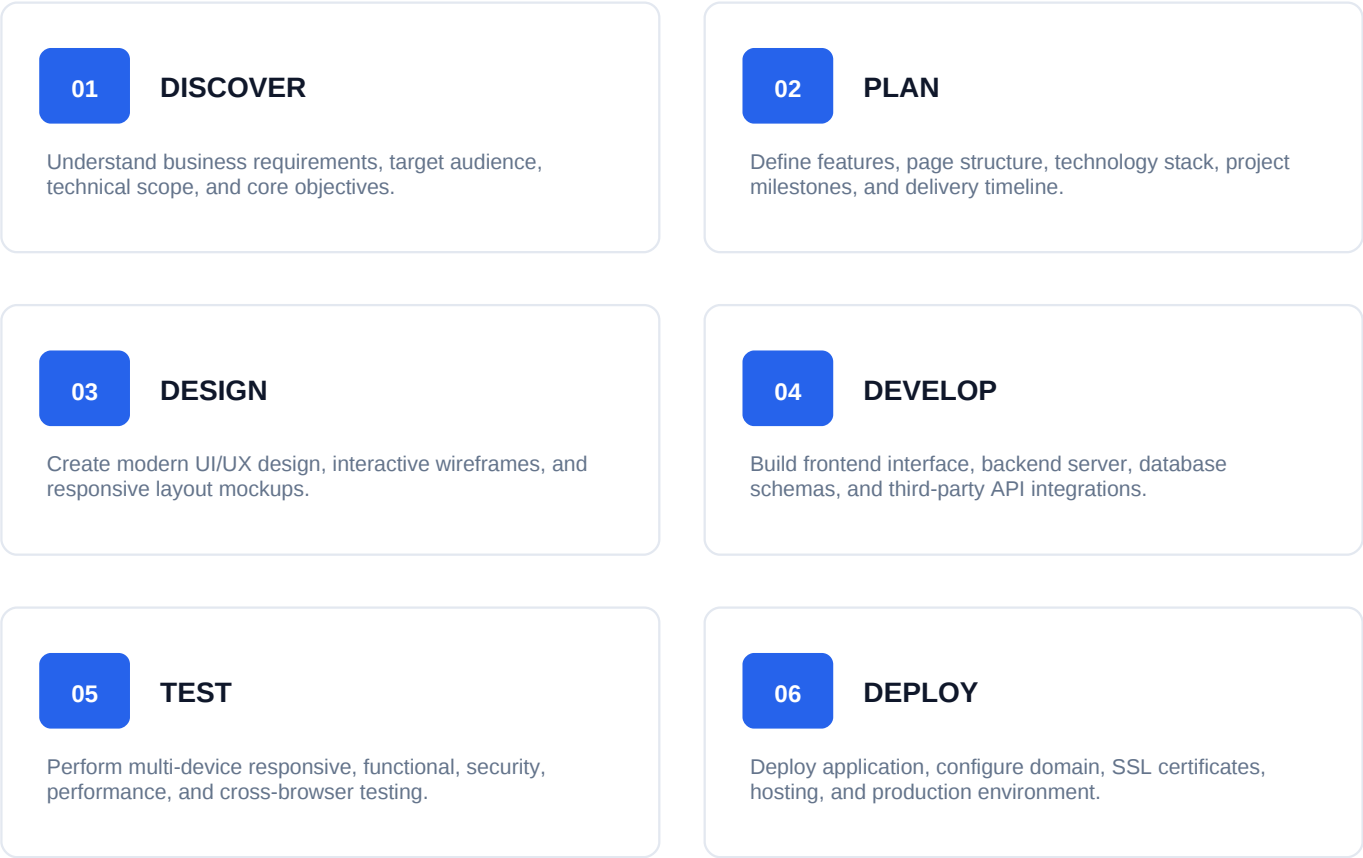

✓ Advanced Security

Your website should not only look good — it should work as a digital business tool.

We focus on high performance, customer conversion, lead generation, and seamless integration with your everyday business operations.

METHODOLOGY

From Idea to Launch

CONTINUOUS LIFECYCLE

Support • Maintenance • Updates

Ongoing technical maintenance, security monitoring, server health checks, and feature updates after deployment.

POLICY

Project Terms & Conditions

1. Project pricing depends on the approved scope, features, and requirements finalized prior to execution.
2. Detailed project requirements should be explicitly finalized and confirmed before technical development begins.
3. Additional functionality requested outside the approved scope document will be evaluated separately and may involve additional charges.
4. Domain registration and hosting server renewal charges are billed separately unless specifically stated as included in the chosen package.
5. Third-party services, API subscriptions, SMS gateways, and external software licenses are charged separately where applicable.
6. Payment milestones and terms will be mutually agreed upon in writing prior to project commencement.
7. Estimated development timelines depend on project complexity and timely provision of required client content and approvals.
8. The client is responsible for providing accurate business information, text copy, high-resolution media, logos, and collateral.
9. Major structural modifications requested after design or code approval may impact delivery schedules and project costs.
10. Final project handover, source code access, and server credentials will be provided after all agreed payment obligations are fulfilled.
11. Maintenance and post-launch technical support terms depend on the selected service package or maintenance contract.
12. Search engine rankings (SEO) cannot be guaranteed as ranking position depends on search engine algorithms and external market factors.
13. Hosting, domain, and third-party service renewals are strictly subject to their respective service provider policies and pricing changes.
